

**INDOSOLV***Solvent Base Cleaning Agent***DESCRIPTION :**

**INDOSOLV** can be used as universal cleaning agent without any problems, e.g. or the removal of sticky deposits on wires, felts, rolls, suction box covers, foils, frames, etc.

The specialty-coordinated components of the product ensure an excellent cleaning effect in case of mostly organic contamination.

The accurately coordinated hydrophilic and hydrophobic components of this formulation work in two ways. Firstly the treated area is quickly wetted which in turn leads to weakening of the forces bonding the mostly organic contamination which then detaches easily from the base material.

**PHYSICAL AND CHEMICAL PROPERTIES :**

Form	Fluid
Smell	Characteristic
Chemical characteristic	Mixture of aromatic, odour reduced solvents
Solubility	Emulsifiable
PH at 20°C	± 8
Density at 20°C	0.8 gr/cm <sup>3</sup>
Viscosity	< 30 mPas

**SPECIAL INFORMATION:**

- **INDOSOLV** does not foam.
- Maximum reaction time: 15 minutes
- Dilution with water is possible, however, depending in the degree of dilution the effectiveness decreases accordingly.
- **INDOSOLV** can be subsequently be mixed with an alkaline or acid cleaner.

**RECOMMENDATION FOR APPLICATION:**

**INDOSOLV** must be applied undiluted, e.g. by means of a drum pump via spray pipe or by locally by pouring on. The dosage depends on the contamination level of the item to be cleaned. Dosage: 1 – 1.5 kg / m<sup>2</sup>.
